CONTENTS

Preface	
<i>Sergi Sabater and Arturo Elosegí</i>	11

WHY CONSERVE RIVERS?

1. River Conservation: Going against the Flow to Meet Global Challenges

Sergi Sabater, Arturo Elosegí and David Dudgeon

1.1. Global change and implications for freshwater ecosystems.....	15
1.2. An atlas of global change	19
1.3. Why is it important to conserve rivers?	22
1.4. The main threats to river conservation	27
1.5. What needs to be done? Elements for a debate	29
1.6. References	34

STRESSORS AFFECTING RIVERS

2. The Silent River: The Hydrological Basis for River Conservation

<i>Tim Burt</i>	39
2.1. The river continuum.....	40
2.2. Where does the water go when it rains?	41
2.3. Water balance	43
2.4. Global hydrology: Climate and river regimes	44
2.5. Flow regimes at the regional scale	46
2.6. Climate change and long-term change in river flow response	47
2.7. Impacts of human actions on river flows	49
2.8. Future projections	55
2.9. Is our glass half full or half empty?	56
2.10. References	58

3. River's Architecture Supporting Life*Ramon J. Batalla and Damià Vericat*

3.1. River form: The starting point for conservation	61
3.2. What is in there? Water, pebbles... and sometimes mud	63
3.3. Shaking beds move organisms: Life requires complexity and change	64
3.4. Rivers react to human actions	68
3.5. Floods: When the water dances with sediments. Opportunities for restoration	72
3.6. Maintaining river form and processes: A way to keep rivers active	73
3.7. References	74

4. Nutrient Pollution: A Problem with Solutions*R. Jan Stevenson and Peter C. Esselman*

4.1. Nutrients: Necessary but spelling of harmful when in excess	78
4.2. Nutrient effects on algae	82
4.3. Nutrient effects on invertebrate and fish biodiversity	86
4.4. Challenges with measuring biodiversity responses to nutrients	89
4.5. Nutrient effects on ecosystem goods and services	92
4.6. Treatment and policy solutions for nutrient pollution management.....	93
4.7. Management targets for nutrient pollution	96
4.8. References	102

5. The River Drugstore: The Threats of Emerging Pollutants to River Conservation*Mira Petrovic, Antoni Ginebreda, Isabel Muñoz and Damià Barceló*

5.1. What is pollution?	105
5.2. Sources	106
5.3. Main classes of organic microcontaminants	109
5.4. Effects on aquatic organisms and biodiversity	119
5.5. Present threats and future challenges	124
5.6. References	125

ECOLOGICAL RESPONSES OF RIVERS UNDER THREAT**6. Anthropocene Extinctions: Global Threats to Riverine Biodiversity and the Tragedy of the Freshwater Commons***David Dudgeon*

6.1. The tragedy of the commons	129
6.2. A global geography of river threat	133
6.3. Principal threats to the freshwater commons	137
6.4. Understanding the intensity of threats to riverine biodiversity	143
6.5. The next great extinction?	145
6.6. Imperiled river invertebrates: The pearly mussels	148
6.7. Shifting baselines	154
6.8. Climate change	159
6.9. What is need?	162
6.10. References	165

7. So What? Implications of Loss of Biodiversity for Ecosystem Functioning*Sylvain Dolédec and Núria Bonada*

7.1. What is the problem - or why should we measure the effects of biodiversity loss on ecosystem functioning?	169
7.2. What do we know from stream ecology?	178
7.3. Take-home message	189
7.4. References	191

8. The Problem of Invasive Species in River Ecosystems*Kurt D. Fausch and Emili Garcia-Berthou*

8.1. The problem of biological invasions in rivers	193
8.2. Principles for invasions in river ecosystems	196
8.3. Human stressors that can change the outcome of invasions	200
8.4. Invasions cause effects at multiple levels in ecosystems	203
8.5. An intercontinental comparison: The Colorado River and Iberian Peninsula	204
8.6. Implications for conservation	209
8.7. What should be our priorities?	211
8.8. Conclusions	213
8.9. References	213

9. Between the Land and the River: River Conservation and the Riparian Zone

Tim Burt, Gilles Pinay, Nancy Grimm and Tamara Harms

9.1. Why consider the riparian zone?	217
9.2. Hydrology of the riparian zone	222
9.3. Biogeochemical cycling in the riparian zone	226
9.4. Human drivers of change in riparian zones	233
9.5. Riparian zone destruction and restoration	237
9.6. References	238

10. Ecological Connectivity for River Conservation

Deb Finn and Jeremy Monroe

10.1. Fish and amphibians in the Necklace Lakes	241
10.2. What is <i>connectivity</i> ?	242
10.3. Describing connectivity in river ecosystems	244
10.4. Network connectivity	247
10.5. Web connectivity	255
10.6. Sustaining rivers as networks of webs: Conservation challenges	262
10.7. Emerging concepts	272
10.8. References (with comments)	273

SCIENCE AND SOLUTIONS: MOVING BEYOND THREATS

11. Ecological Restoration to Conserve and Recover River Ecosystem Services

Margaret A. Palmer and Owen T. McDonough

11.1. From restoring river ecosystems to restoring river ecosystem services	279
11.2. River restoration goals	283
11.3. River restoration approaches	284
11.4. Shifting restoration focus from the channel to the catchment	296
11.5. Conclusions and recommendations	297
11.6. References	298

12. The Role of Science in Planning, Policy and Conservation of River Ecosystems

Cliff Dahm, Andrew Boulton, Lindsay Correa, Richard Kingsford, Kim Jenkins and Fran Sheldon

12.1. Science for river conservation	301
12.2. The policy, planning and management arenas	303
12.3. Inserting science into policy, planning and management	306
12.4. Science and policy in the California delta	307
12.5. The Delta Reform Act of 2009	310
12.6. The Delta Plan	311
12.7. Science and policy in conservation of the Murray-Darling Basin	313
12.8. The Sustainable Rivers Audit – Murray-Darling Basin	315
12.9. Interacting with managers and policy makers from an Australian perspective	318
12.10. Communicating the role of multiple stressors on the MDB System	320
12.11. The need for <i>champions</i> for improving the role of science in river conservation	321
12.12. Challenges for inserting science into river conservation	323
12.13. Tactics for enhancing communication and resolving conflict	324
12.14. Conclusions	327
12.15. References	327

13. Good News: Progress in Successful River Conservation and Restoration

Andrew Boulton, Cliff Dahm, Lindsay Correa, Richard Kingsford, Kim Jenkins, Junjiro Negishi, Futoshi Nakamura, Peter Wijsman, Fran Sheldon and Peter Goodwin

13.1. Successful river restoration	331
13.2. Using Strategic Adaptive Management to successfully conserve rivers	332
13.3. Work in progress: Six success stories	335
13.4. Emerging concepts	354
13.5. References	355

14. Concluding Remarks on River Conservation*Arturo Elozegi, Sergi Sabater and Andrew Boulton*

14.1. Problems and solutions	359
14.2. An historical perspective of river use and conservation	361
14.3. Turning the tide: Conserving species and ecosystems.....	364
14.4. How <i>you</i> can make a difference	368
14.5. References	371
List of Boxes	373
List of Figures	375
List of Tables	383
Index	385
About the Authors	391
